

APOS KIDS SCHOOL

AI INNOVATOR PROGRAM

Six-Month Learning Pathway

Learn • Build • Deploy • Market • Grow

A practical, project-based pathway for future-ready young learners

The Six-Month Journey

The program develops skills in a deliberate sequence. Students first learn how to work with AI, then build and publish real digital projects, and finally learn how to present, market and responsibly monetize those skills.

LEVEL 1

Foundational AI Skills

2 MONTHS

- Prompt engineering
- AI content creation
- Graphic design fundamentals
- Introductory web concepts
- Responsible AI use

LEVEL 2

AI Development and Deployment

2 MONTHS

- Websites and functional apps
- Git and GitHub workflows
- AI-assisted coding
- Deployment and testing
- Advanced AI video projects

LEVEL 3

AI Marketing and Entrepreneurship

2 MONTHS

- Digital marketing with AI
- E-commerce and social commerce
- Service business pathway
- Client communication and sales
- Business launch project

● Program Learning Model

- Three live online classes per week with guided practice and assignments.
- Project-based learning: students demonstrate skills by building, presenting and improving real work.
- Progress is based on participation, assignments, project quality and responsible technology use.
- Public accounts, payments, client communication and selling activities require parent or guardian supervision.

AI Development and Deployment

This two-month level turns foundational AI knowledge into working digital products. Students learn to plan, build, test and publish portfolio-ready websites, simple apps and advanced video projects.

1

Advanced Prompt Engineering

Structured prompts, expert roles, context files and project breakdown.

2

Web Development Basics

HTML, CSS, JavaScript, responsive layouts, forms and accessibility.

3

AI-Assisted Coding

ChatGPT, Codex and Google AI Studio for guided development and debugging.

4

Git and GitHub

Repositories, commits, version history, README files and collaboration basics.

5

Website Deployment

GitHub Pages, Vercel or Netlify, updates, performance and basic SEO.

6

AI App Development

Planning, interfaces, useful tools, APIs and introductory data features.

7

Testing and Security

Bug fixing, cross-device testing, privacy and safe API-key handling.

8

Advanced AI Video

Scripts, storyboards, consistent scenes, voice-over and responsible media.

Level 2 Capstone

Each student or team will build and deploy one complete website or useful app, maintain its GitHub repository, create a short demonstration video and present the finished project.

Why Development and Deployment Matter

Level 2 is designed to move students from basic AI use to structured digital creation. They will learn that a useful website or app is not produced by one prompt; it requires planning, clear instructions, testing, correction and responsible publishing.

Purpose of Level 2

- Turn ideas into working digital products rather than stopping at generated content or designs.
- Develop computational thinking by breaking a large problem into smaller, testable tasks.
- Understand enough code to review, edit and improve AI-generated output instead of copying it blindly.
- Learn how real projects move from planning to development, testing, deployment and maintenance.
- Build confidence through visible results: a live website, a functional app and a project portfolio.

How Students Will Learn

PLAN

Define the user, problem, features, pages and success criteria before asking AI to build.

BUILD

Use ChatGPT, Codex or Google AI Studio as guided assistants while understanding the project structure.

TEST

Check links, forms, layouts, errors, mobile responsiveness, accessibility and safe data handling.

DEPLOY

Organize work on GitHub, publish it online and learn how to update a live project responsibly.

Expected Level 2 Portfolio

Students will finish with a GitHub repository, one deployed website or useful app, a short product demonstration video and a presentation explaining the problem, design choices, testing and improvements.

What Students Will Learn Week by Week

The roadmap is practical and cumulative. Every week adds a skill that supports the final deployed project. Exact pacing may be adjusted to match student progress and project complexity.

WEEK 1**Project Thinking and Advanced Prompts**

User needs, feature lists, structured prompts, context files and task breakdown.

WEEK 2**Web Structure and Interface Design**

HTML, CSS, responsive layouts, navigation, forms and accessible design.

WEEK 3**JavaScript and Interaction**

Buttons, validation, simple logic, data display and interactive page behaviour.

WEEK 4**AI-Assisted Coding Workflow**

Generate, inspect, edit and debug code with ChatGPT, Codex and Google AI Studio.

WEEK 5**Git and GitHub**

Repositories, commits, README files, version history and organized project files.

WEEK 6**Apps, Data and APIs**

Simple app features, introductory data storage, APIs, privacy and secret-key safety.

WEEK 7**Testing and Deployment**

Cross-device tests, bug fixing, GitHub Pages, Vercel or Netlify publishing.

WEEK 8**Capstone and Presentation**

Final improvements, demonstration video, live project and student presentation.

● Important Learning Principle

AI will assist students, but it will not replace thinking. Students must be able to explain what their project does, identify errors, make revisions and demonstrate safe, responsible use.

AI Marketing and Entrepreneurship

This two-month level teaches students how to turn digital skills into a responsible business or service offer. All students learn the shared marketing foundation before selecting a practical pathway.

● Shared AI Marketing Foundation

- Digital business foundations and customer problem selection
- AI branding, content planning and social media marketing
- Paid advertising concepts, campaign metrics and optimization
- Sales communication, lead follow-up and customer care
- Basic finance, ethical marketing, privacy and platform policies

TRACK A

E-Commerce and Social Commerce

- Product research and validation
- Responsible sourcing and pricing
- Daraz and social selling basics
- Product listings and content
- Orders and customer support

TRACK B

Digital Services Business

- Web and app development services
- Design, video and marketing services
- Portfolio and service packages
- Proposals and client onboarding
- Delivery, revisions and retention

Why AI Marketing and Entrepreneurship Matter

Level 3 connects digital creation with real customer needs. Students learn that earning is not based on posting randomly; it requires a useful offer, clear communication, responsible promotion, reliable delivery and accurate record keeping.

Purpose of Level 3

- Help students identify a real customer problem and design an honest product or service offer.
- Use AI to research, plan and produce marketing assets while keeping human judgment and originality.
- Understand the difference between reach, engagement, leads, customers, revenue, cost and profit.
- Develop communication, accountability and customer-care habits needed for responsible work.
- Create a supervised first business launch or service portfolio instead of promising instant income.

Shared Foundation Before Specialization

BRAND

Name, identity, audience, promise and consistent visual communication.

CONTENT

Content pillars, posts, reels, captions, calendars and responsible AI production.

MARKETING

Organic growth, campaign objectives, basic ads, metrics and improvement.

BUSINESS

Pricing, simple records, customer support, ethics, privacy and platform rules.

Expected Level 3 Outcome

Each student will choose one pathway and prepare a brand identity, practical offer, content campaign, sales or lead-generation process, portfolio or store presence, and a parent-supervised 30-day launch plan.

From Skill to Supervised Market Practice

The first four weeks build a common marketing foundation. During the final four weeks, students apply that foundation through either e-commerce and social commerce or a digital-services pathway.

WEEK 1

Business Idea and Audience

Problem selection, customer persona, validation and responsible use of AI research.

WEEK 2

Brand and Offer

Brand identity, value proposition, pricing logic and a clear product or service package.

WEEK 3

AI Content System

Content pillars, monthly calendar, graphics, videos, captions and calls to action.

WEEK 4

Marketing and Measurement

Organic promotion, ad concepts, reach, engagement, leads, sales and optimization.

WEEK 5

Pathway Setup

Store/page and product listing setup, or portfolio, packages and client onboarding.

WEEK 6

Sales and Customer Care

WhatsApp communication, inquiries, objections, follow-up and professional support.

WEEK 7

Operations and Finance

Orders or project delivery, revisions, records, costs, revenue, profit and safety.

WEEK 8

Launch Project

Campaign assets, supervised market test, performance review and 30-day growth plan.

● Parent and Guardian Role

Children must not independently manage payments, paid advertising, public client accounts, contracts or unfamiliar customer interactions. These activities will remain supervised by a parent, guardian or the school.

Fees and Participation Requirements

Level 2 and Level 3 are separate two-month stages. Fees are paid monthly, making the full six-month learning pathway structured and accessible.

LEVEL 2		LEVEL 3	
DURATION	TOTAL FEE	DURATION	TOTAL FEE
2 months	PKR 3,000	2 months	PKR 3,000
2 monthly installments of PKR 1,500		2 monthly installments of PKR 1,500	

Eligibility and Requirements

- Level 2 entry requires successful completion of Level 1 or an approved skills assessment.
- A laptop is required for coding, GitHub, deployment and practical Level 2 projects.
- Students need a stable internet connection and must attend live online classes regularly.
- Assignments and capstone projects must be completed to demonstrate learning outcomes.
- Parent or guardian supervision is required for public accounts, payments, client work and business activities.

Assessment and Completion

Student progress will be evaluated through attendance, practical assignments, project demonstrations, problem-solving and responsible AI use. Program completion should reflect demonstrated skills, not attendance alone.

What Students Will Be Able to Do

By completing Levels 2 and 3, students will move beyond consuming technology. They will learn to create useful digital work, explain their decisions and take responsible first steps toward entrepreneurship.

1

Plan and build responsive websites with AI-assisted development tools.

2

Create simple functional apps and connect introductory data or API features.

3

Use GitHub to organize projects and publish work online.

4

Test, debug and improve projects instead of copying AI output blindly.

5

Produce advanced educational or promotional videos with responsible AI workflows.

6

Create a brand, content plan and digital marketing campaign.

7

Choose an e-commerce, social-commerce or digital-services pathway.

8

Prepare a portfolio, business offer and supervised 30-day launch plan.

FROM AI LEARNERS TO RESPONSIBLE CREATORS

APOS Kids School prepares young learners to build, deploy, communicate and grow - with skills, supervision and purpose.
